Unadvertised Addresses in APNIC's Registry

Geoff Huston

APNIC

APRICOT 2019 APNIC 47

2000 - 2018: IPv4 Adddresses

# 2000 - 2018: IPv4 Addresses
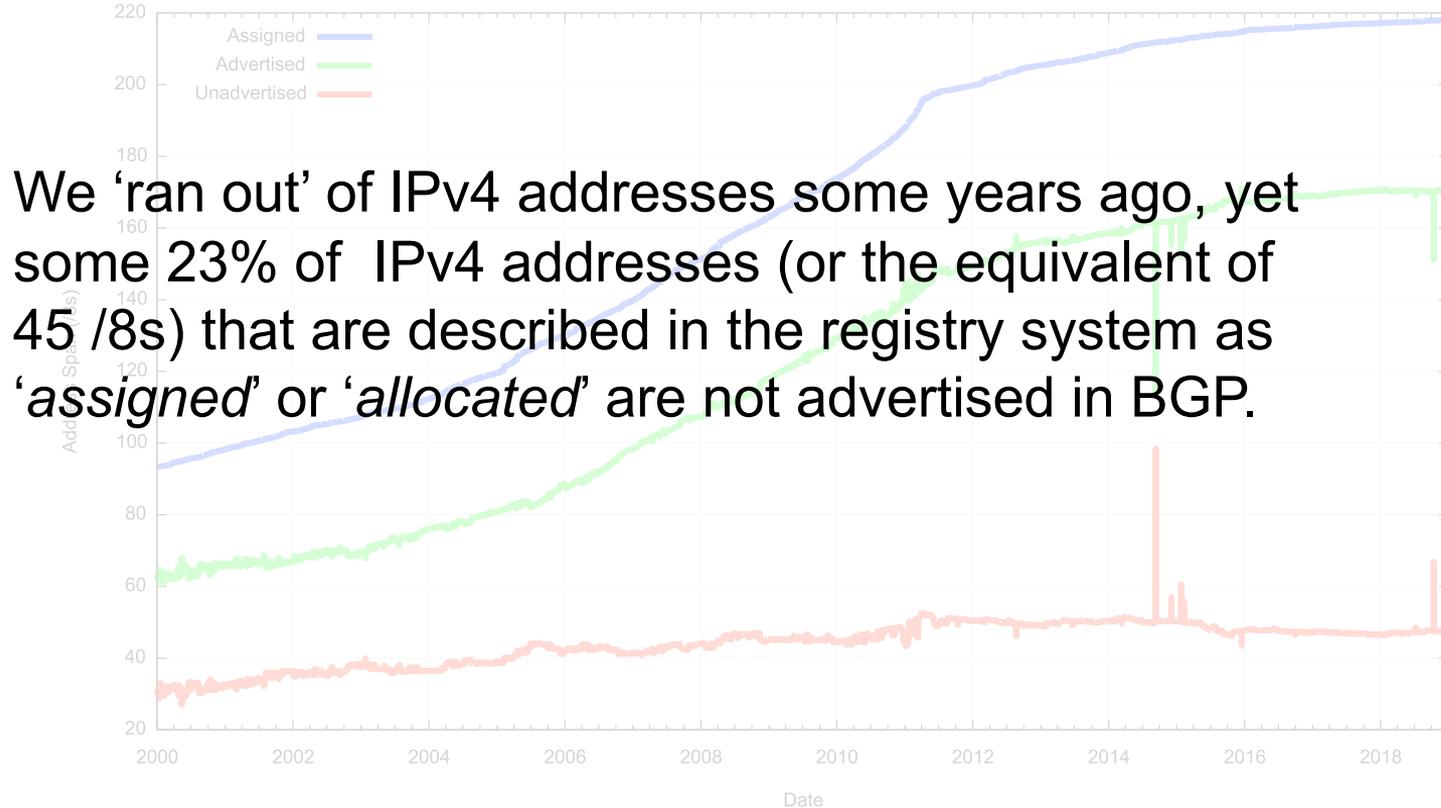

We 'ran out' of IPv4 addresses some years ago, yet some 23% of IPv4 addresses (or the equivalent of 45 /8s) that are described in the registry system as '*assigned*' or '*allocated*' are not advertised in BGP.

2000 - 2018: Unadvertised Addresses
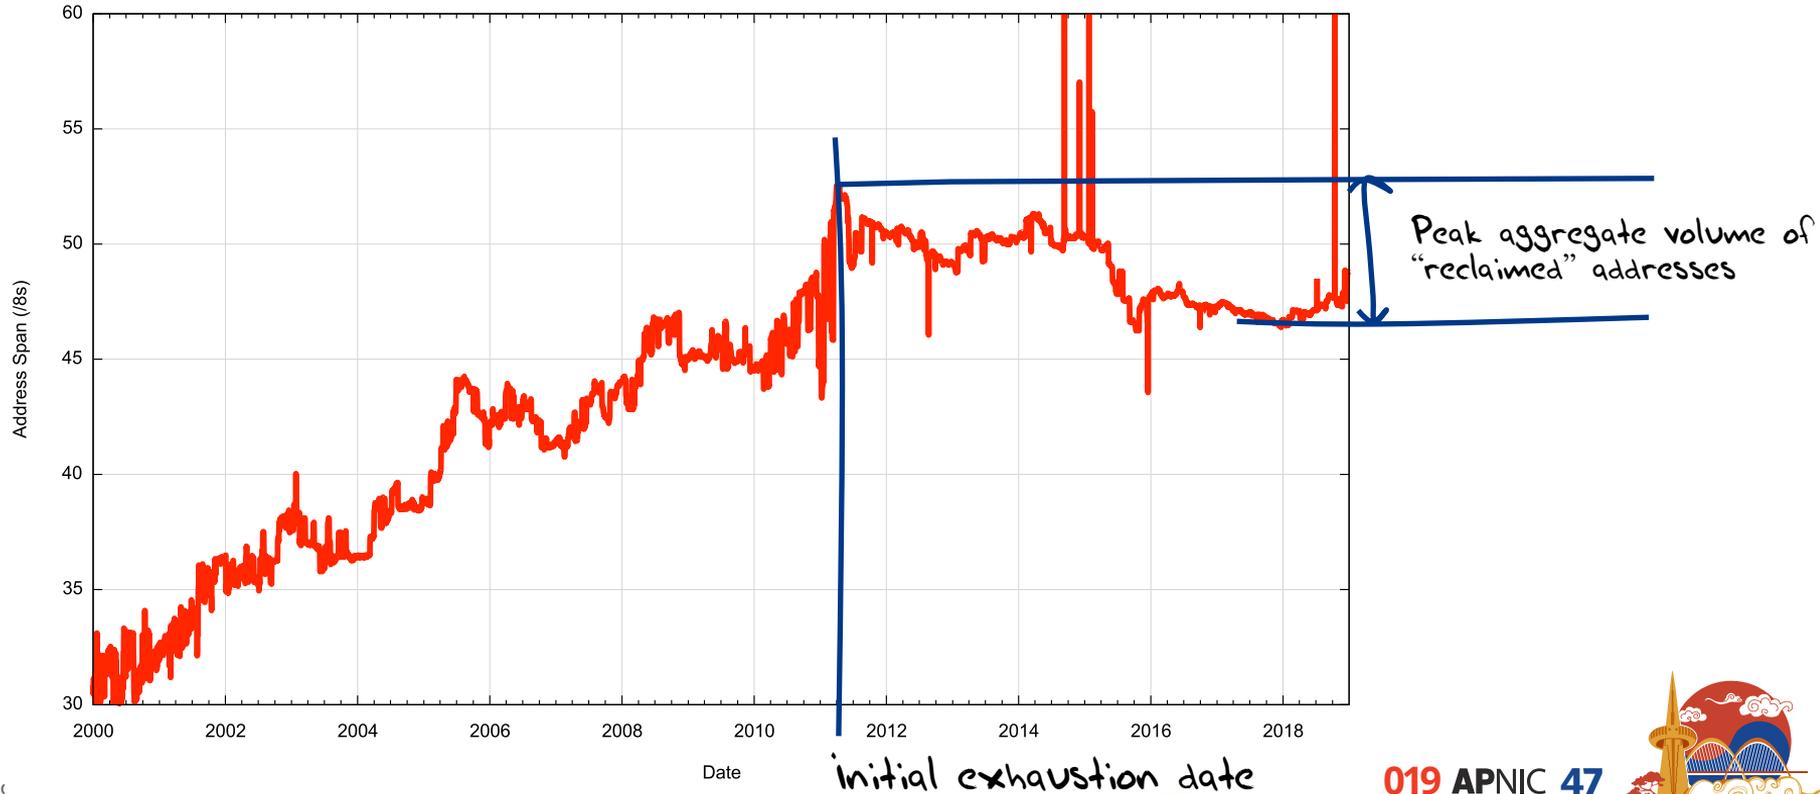

Per-RIR Breakdown - 2016 to now

Per-RIR Unadvertised Pools
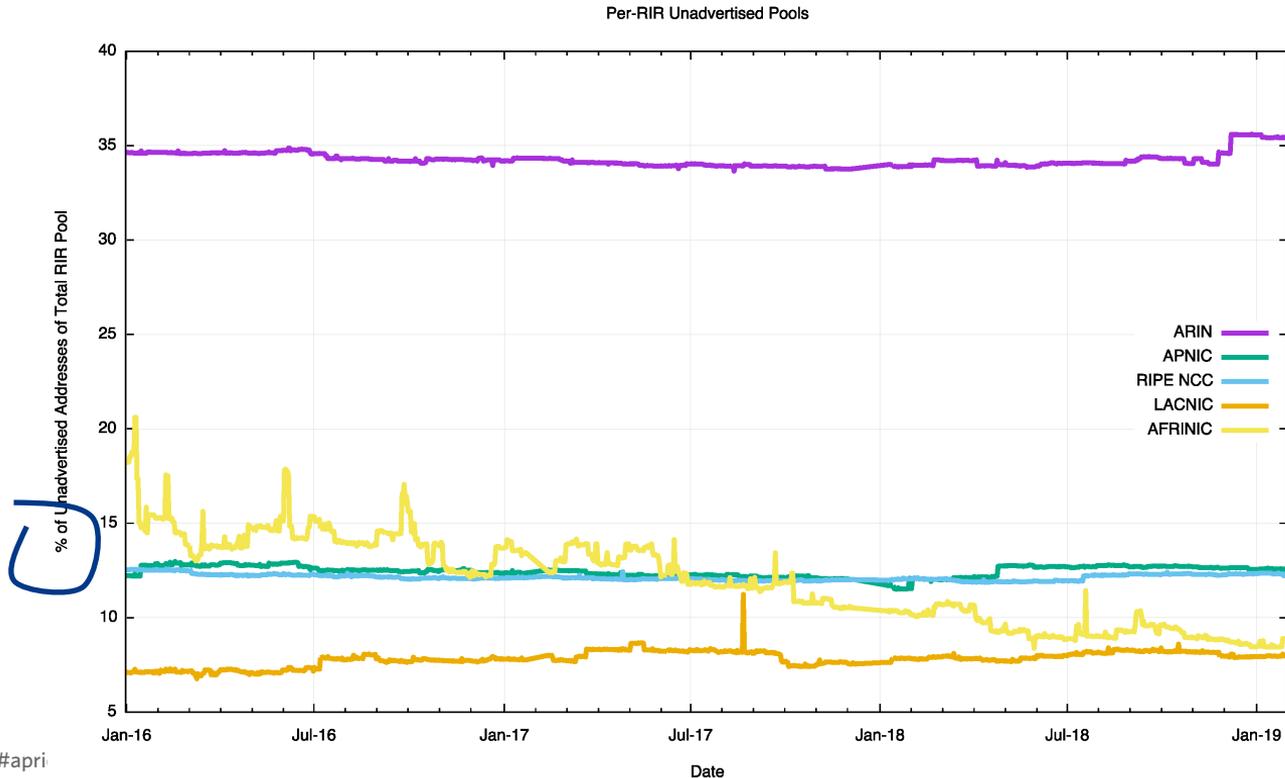

ARIN's legacy pool has a high level of unadvertised addresses

RIPE NCC and APNIC are both have 12÷ of their total IPv4 pool size as unadvertised addresses

ICOT 2019 APNIC 47

Changes to the Unadvertised pool since 2016

Per-RIR Unadvertised Pools since 2016
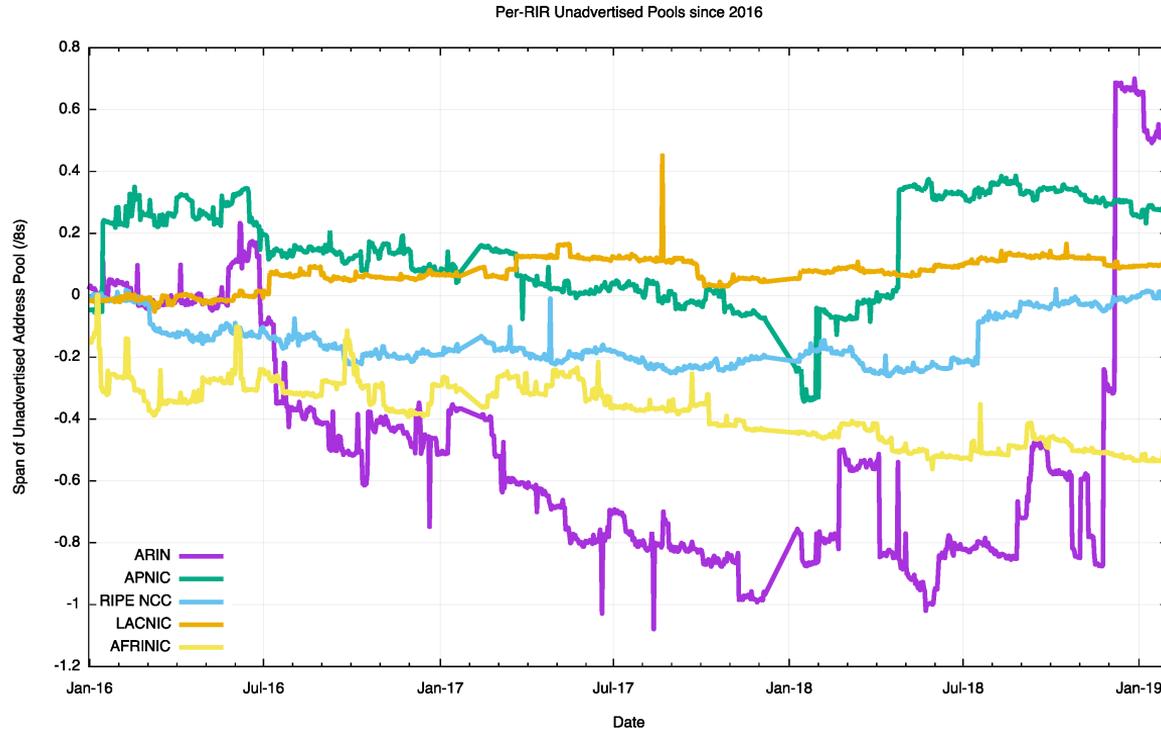

Since 2016 the APNIC unadvertised pool has grown by 5M addresses

APRICOT 2019 APNIC 47

APNIC IPv4 data since 2016

APNIC Address Pools since 2016

Legend:
- Unadvertised
- Advertised
- APNIC Pool
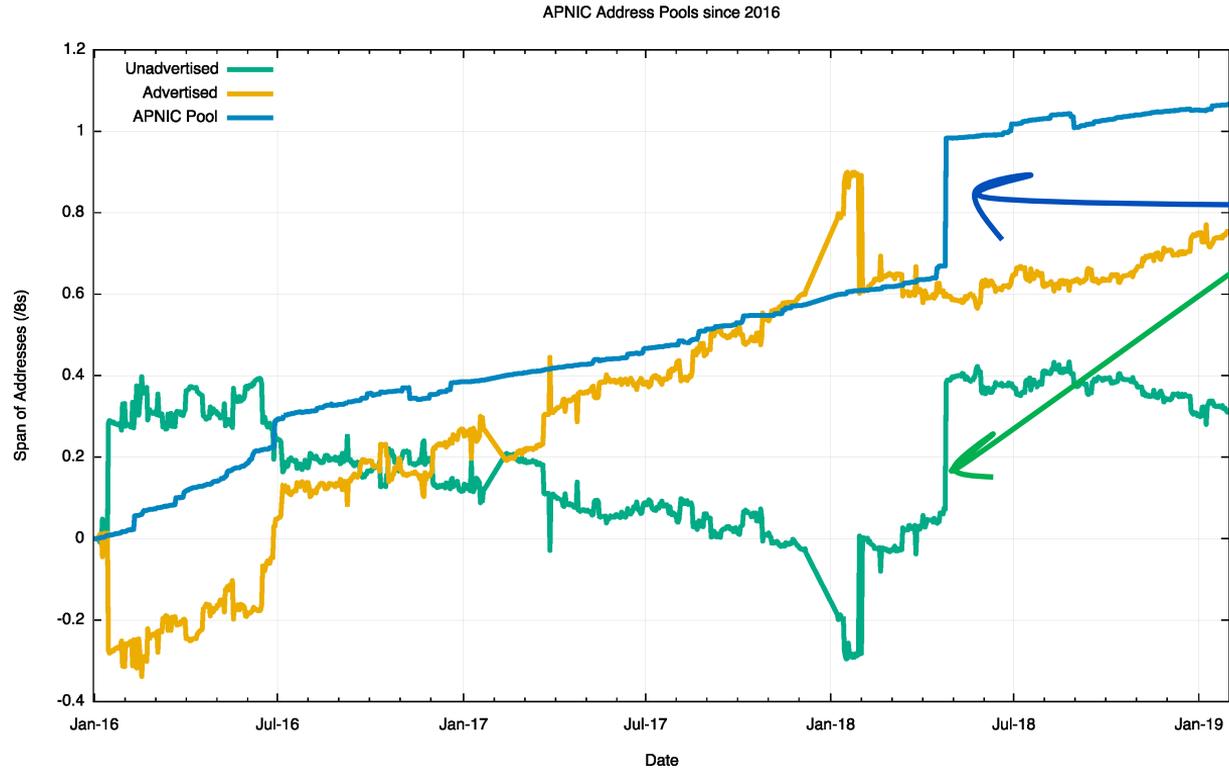

This is a transfer of a /10 + /12 from ARIN to AliCloud

APNIC IPv4 Status - 2019

- IPv4 Address span in Registry*: 880 M addresses

- Advertised Addresses: 770 M addresses

- Unadvertised Addresses: 110 M Addresses

* Excluding 4.4M 'reserved' addresses

APRICOT **2019** AP**NIC** **47**

APNIC IPv4 Status - 2019

- IPv4 Address span in Registry*:   880 M addresses

- Advertised Addresses: 770 M addresses

- Unadvertised Addresses: 110 M Addresses

How "old" are these unadvertised addresses? Are they legacy addresses or are they more recently allocated addresses?

* Excluding 4.4M 'reserved' addresses

Using the Maxmind geoloc database

The differences between these two tables expose a larger issue with the interpretation of geolocation codes in the address registries which i won't delve into here

APRICOT 2019 APNIC 47

Observations

- 110M addresses in the APNIC registry are not visible in the BGP routing table at present.

  This is 12% of the total size of the allocated IPv4 address pool in the APNIC registry

- 30% of the unadvertised pool in the APNIC registry was allocated/assigned by APNIC in the 3 year run up to pool exhaustion in 2011

- Approximately 10% of the unadvertised pool is due to recent address transfers that are as-yet unadvertised

- Some 30% of the unadvertised pool is composed of pre-APNIC legacy address allocations (including AUNIC, and NZ registry transfers into APNIC that occurred in ~1999).

APRICOT 2019 APNIC 47

Notes

- This analysis used a local archive of the daily stats files generated by the RIRs

- If an address block is listed in the APNIC transfer log, I've used the date of the transfer rather than the original allocation/assignment date

- I have not included APNIC-*reserved* blocks in this analysis.
  - 1,282 entries are marked "reserved"
  - Reserved addresses total 4,423,680 addresses (roughly a /10)

- The BGP feed is taken from AS131072

Thanks
